# **APPENDIX 2: Glossary**

Accountable decision-

maker

In the context of data under this framework, this is usually the Data Sponsor (Executive Director level) or their delegate, or the Data Custodian. For complex data sharing proposals, it could be

a Chief Executive or a Deputy Secretary.

Aggregated data Aggregated data (as distinct from unit record data) is produced

by grouping information into categories, typically with a combined

count (i.e. numerical value) within each category.

API Application Programming Interface

APPs Australian Privacy Principles, found in the Privacy Act

Attribute disclosure When new facts can be learned or inferred about an individual

from a dataset.

Collection A 'collection' of information occurs when the information comes

into the possession or control of an organisation.

Confidentiality A Confidentiality Undertaking is a document containing a number Undertaking of undertakings made by a data recipient pertaining to the

of undertakings made by a data recipient pertaining to the handling of shared data. A Confidentiality Undertaking may be required to be executed by a Data Provider prior to data sharing (for example, if required by organisational data government

frameworks and policies).

Data Any facts, statistics, instructions, concepts or other information in

a form that is capable of being communicated, analysed or processed (whether by an individual or by a computer or other

automated means).

For the purposes of this document, 'information' and 'data' are

used interchangeably.

Data may or may not include 'personal information' or 'health

information, or other 'special category' information.

Data asset or dataset A data asset or a dataset is a body of information or data,

managed as a single unit, which is recognised as having value to the organisation and enables it to perform its business functions.

31

Data breach If personal information has been lost, or accessed or disclosed

without authority. A data breach will be 'notifiable' if the breach is

likely to result in serious harm to one or more affected

individuals.

Data Custodian Makes decisions about the management of, access to and

release of a data asset, including the definition of quality, and

ensuring the asset is registered or catalogued.

Data Owner The person or organisation responsible for the creation of the

data, and who exercises authority over the data. The Data Owner may delegate or transfer certain aspects of its authority and its responsibilities to a Data Custodian, including via an agreement. For example, a general practice that collects patient data may (as the Data Owner) provide this data to another organisation, such as a state health department (as the Data Custodian) for specific

purposes under an agreement.

Data Provider The organisation which holds and controls the source health data

that is the subject of a synthetic data request. is disclosing data

to one or more of the other organisations

Data Requestor The organisation that is requesting the generation of synthetic

data from source data held by one of more of the other

organisations

Data Sponsor Undertakes data ownership on behalf of an organisation and

ensures appropriate data governance policies are in place. The Data Sponsor may have the authority to approve data sharing.

Data Steward Has day to day management of a data asset on behalf of the

Data Sponsor, including ensuring that data quality and other standards are met. Provides support to Data Custodians and

Data Sponsors.

De-identified data "De-identified" data means that a person's identity is no longer

apparent, or cannot be reasonably ascertained following the successful application of one or more de-identification techniques

to 'personal information'22

Disclosure The provision of personal information to another party outside an

organisation

<sup>&</sup>lt;sup>22</sup> See the NSW Information & Privacy Commission Fact Sheet 'De-identification of personal information', 2020, <a href="https://www.ipc.nsw.gov.au/fact-sheet-de-identification-personal-information">https://www.ipc.nsw.gov.au/fact-sheet-de-identification-personal-information</a> and the Office of the Australian Information Commissioner's guide 'De-identification and the Privacy Act', 2018, <a href="https://www.oaic.gov.au/privacy/privacy-guidance-for-organisations-and-government-agencies/handling-personal-information/de-identification-and-the-privacy-act">https://www.oaic.gov.au/privacy/privacy-guidance-for-organisations-and-government-agencies/handling-personal-information/de-identification-and-the-privacy-act</a>

DSA Data Sharing Agreement

DUA Data Use Agreement

Dummy data Sometimes described as a 'placeholder' or 'substitute' for real

data. Dummy data will typically be fabricated to mimic the

structure of real data for software or algorithmic testing purposes,

but is non-meaningful and is not suitable for analysis.

Fake data

An umbrella term that means artificially generated data. Dummy

data, mock data and synthetic data can all be described as 'fake

data'

Five Safes A framework for considering how to control two types of privacy

risks, when sharing data within a controlled setting

Health consumer Individuals who use (or will use) health services, including their

family and carers

Health information Personal information that is about a person's:

physical or mental health

disability

current, past or future health services provided to them

wishes about future health services

actual or intended donation of body parts, organs or body substances

Substances

genetic information predictive of health

· healthcare identifiers, and

all other information collected in the course of providing a

health service.

HREC Human Research Ethics Committee

Identity disclosure When data is re-identified and a person's identity can be

assigned to a record. Identity disclosure can arise by one of two ways: by either matching a person to data (such as taking an individual, and finding data that matches them), or matching data

to a person (such as starting with the data and finding the

individual to whom that data relates).

Information See 'data'

Insights Information or details derived from data once it has been

processed or analysed; the message conveyed by (or in

reference to) data.

IPPs Information Protection Principles, found in the PPIP Act

Membership Membership disclosure occurs if it can be determined if an disclosure individual's data was in the source dataset that was used to

generate a synthetic dataset.

Mock data

Simulated or fictious data that is not derived or created from real

data. It may be designed to replicate the structure and format of real data but does not contain or relate to real data records.

NHMRC National Health and Medical Research Council

OAIC Office of the Australian Information Commissioner

Output The outcomes resulting from data sharing. For example, data

analysis, results, insights, reports, or other information generated

from the shared data.

Personal information In the context of this framework, personal information means any

information about a person or that relates to a person who is at least reasonably identifiable. A person may be 'identifiable' if they can be 'distinguished' from all other members of a group. This may not necessarily involve identifying the person by name. Information does not have to be 'private' to be included in this definition. It can be true or false, an opinion or fact, recorded in a material form, or not recorded at all. Personal information can be

about any living person, or a person who has died.<sup>23</sup>

Personal information includes 'health information' and other

special category data.

PIA Privacy Impact Assessment

PPIP Act Privacy and Personal Information Protection Act 1998 (NSW)

Privacy Act 1988 (Cth)

Real data 'Real world' data that relates to actual people, places, events,

etc

Secondary purpose /

secondary use

Using personal information for a purpose *other than* the primary

purpose for which the information was originally collected

<sup>&</sup>lt;sup>23</sup> This meaning encompasses the elements of 'personal information' as defined in the range of privacy laws described in Appendix 3.

Sensitive information Personal information relating to an individual's ethnic or racial

origin, political opinions, religious or philosophical beliefs, trade union membership, sexual orientation activities, criminal record, health or genetic information, and some aspects of biometric information. Sensitive information is subject to additional legal

privacy protections

Sharing Data sharing involves data being provided from one organisation

(the Data Provider) to another party at another organisation

(known as the Data Requestor or End User)

Source data The original data collected and held by the Data Provider from

which a synthetic dataset will be generated

Statistical disclosure

risk

The risk that the identity of individuals, or new information about known individuals, within a dataset can be revealed. Includes

both attribute disclosure and identity disclosure.

Statistical properties Characteristics of a dataset that can be measured, analysed or

interpreted

Synthetic data

Data generated by a system or model that can mimic and

resemble the structure and statistical properties of real data.<sup>24</sup>

Synthetic data request A synthetic data request could include:

One organisation requests another organisation to generate a

synthetic dataset for a specific project

An organisation wishes to establish a synthetic dataset for

multiple potential projects / purposes

An organisation (or End User) requests to access or use a

synthetic dataset that was created for a different purpose or use

case

Unit record data

Also called 'micro' data, this is data at the level of a single

observation, for example data items relating to a unique individual, or a particular entity (such as a general practice)

Use The use of personal information by a person inside an

organisation

'Very low risk' In the context of this framework, 'very low risk' of re-identification

means that even though it may be technically possible to identify

35

<sup>&</sup>lt;sup>24</sup> From the IAPP: https://iapp.org/resources/article/key-terms-for-ai-governance/

an individual from information, doing so is so impractical that there is almost no likelihood of it occurring.<sup>25</sup>

<sup>&</sup>lt;sup>25</sup> This is the standard of de-identification used by the OAIC for information to no longer be regarded as 'personal information' for the purposes of the Privacy Act. See: <a href="https://www.oaic.gov.au/privacy/privacy-guidance-for-organisations-and-government-agencies/handling-personal-information/what-is-personal-information">https://www.oaic.gov.au/privacy/privacy-guidance-for-organisations-and-government-agencies/handling-personal-information/what-is-personal-information</a>
